ETM[®] (Enterprise Telephony Management) System v7.1.1 Build 45 Release Notes

Who Should Install This Software

All customers running v7.1.1 of the ETM System should install this update. To obtain the update,, contact SecureLogix Customer Support. This update resolves the issues listed below. Before installing this update, you must have v7.1.1 build 41 installed.

Issues Addressed in This Update

- ETM-27302—Calls showed different start times in reports. When grouping calls in a report, the calls were appearing with different start times depending on whether they grouped by **Start Time** or **Local Start Time**.
- ETM-27308—Call type **Undetermined** was being shown as the value **Unknown** in Reports on calls on TDM circuits
- ETM-27300—Null pointer exceptions were occurring in reports.
- ETM-27313—Duplicate scheduled reports occurred when editing a scheduled report. A second scheduled report was being created (as opposed to just the existing report being modified in place). Both reports executed at their scheduled times.
- ETM-27316—Sorting of Listings in Directory Manager was not working properly.
- ETM-27319—The ability to create shortcuts in Usage Manager was missing.
- ETM-27311—The **Edit Blacklist** button on Adaptive IPS was sometimes grayed out.
- ETM-27296—The Call Monitor had a sorting issue.
- ETM-27315— When multiple copies of the Call Monitor were brought up containing the same span, different results appeared in the different monitor windows.
- Usage Manager failed to launch on Windows host platforms using French language operating system settings.
- ETM-27317— SIP Cancel sometimes included incorrect branch value in the Via header.
- ETM-27318— SIP Ack sometimes incorrectly included the same Via branch value as the Invite.
- ETM-27320— Panics occurred during SIP Options response handling.

Current Application Versions as of This Update

Appliance Application Packages

All ETM Appliance packages —7.1.53

Server and Client Applications

v7.1.1 Build 45
